

The month of May has begun and that marks the height of summer. While we have faced some high temperatures in March and April, May is said to be the hottest month of the year. Here are some tips on keeping cool during the summer:

- Stay hydrated: This one is the most obvious one, but it is the most important. One of the most effective way to avoid a heat stroke, is to stay hydrated. In case you have spent too long in the sun, make sure to consume ORS to keep your electrolytes in check.
- Another simple but effective trick is to opt for light and breathable fabrics both for indoors and outdoors. An easy tip for staying cool at night, without using the air conditioner, is to use bedding made of cotton or linen.
- While at home, a few small changes, can help reduce the temperature of your space, and avoid the use of air conditioners. Switching to LED lighting, and keeping the sun out through blinds or heat reducing films can reduce the temperature and limit the use of air conditioners.
- You can use this opportunity to cultivate your home garden, with plants that not just purify the air but also reduce the temperature around them.

Stay cool and enjoy the season with lots of fresh mangos and cold beverages! And learn German with us!
